

# COMP41680 Assignment 1

**Deadline:** Sunday 19th March 2023

## Summary:

The objective of this assignment is to collect a dataset from a public Web API and then use Python to prepare, analyse, and derive insights from the collected data.

The assignment should be implemented as two Jupyter Notebooks (not script files). Your notebooks should be clearly documented, using comments and Markdown cells to explain the code and interpret the results of your analysis.

## Tasks:

Complete the following two tasks in two separate notebooks:

### 1. Data Collection

- Choose one of the APIs from the list of web APIs provided at the link below:  
<http://mlg.ucd.ie/modules/python/api-list.html>
- In your first notebook, collect data from your chosen web API using Python. Depending on the choice of API, you might need to repeat the collection process multiple times to download sufficient data for analysis.
- Save the collected dataset in an appropriate format for subsequent analysis.

### 2. Data Preparation and Analysis

- In your second notebook, load the saved dataset from Task 1 into an appropriate data structure.
- Apply any data preprocessing steps that might be required to clean, filter or transform the dataset before analysis.
- Analyse, characterise, and summarise the cleaned dataset, using tables and visualisations where appropriate.
- Clearly explain each step of this process and interpret the results which are produced. Markdown cells should be used for this purpose.

### 3. Discussion and Conclusion

- At the end of your second notebook, discuss the following aspects of your assignment in Markdown cells (3-4 paragraphs):
  - a) Discuss any challenges faced in collecting data from the Web API.
  - b) Summarise the key insights gained from your analysis of the data.
  - c) Suggest ideas for further analysis which could be performed on the data (e.g. alternative analyses, integration of other sources of data).

**Guidelines:**

- The assignment should be completed individually. All submissions will be subject to plagiarism checking. Any evidence of plagiarism will result in a 0 grade.
- The grade awarded will depend on the complexity of the analysis and level of detail, i.e. data cleaning and preparation, analysis, interpretation etc.
- Submit your assignment via the module Brightspace page. Your submission should be in the form of a single ZIP file which contains:
  1. The two Jupyter notebooks for Task 1 and Task 2 respectively. These should be IPYNB files, not a HTML files.
  2. The dataset you saved in Task 1. If your dataset is too large to upload to Brightspace, please include a smaller sample of the data in the ZIP file.
- In your notebook please clearly state your full name, student number, and the name of the web API which you have chosen for your assignment.
- Hard deadline: Submit by end of 19th March 2023.

Penalties will apply for late submissions:

- 1-5 days late: 1 grade point deduction, e.g. B to B-
- 6-10 days late: 2 grade point deduction, e.g. B to C+
- Assignments will not be accepted later than 10 days without Extenuating Circumstances formally approved by UCD.
